

## Highly Operable E-touch compact3

The E-touch compact3 takes the easy operability of the previous YC series controller and adds several assist features to become even easier to use.

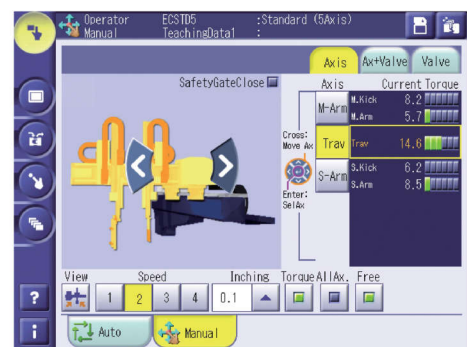

## Cycle-Up Function NEW PAT.P

This feature displays required times per robot operation in a step-by-step list. This aid helps operators identify and target areas of the sequence to achieve shorter overall cycle times and raise productivity.

## Manual Torque Monitor NEW

Displays a torque gauge for each axis during robot teaching, to show operator how much load the robot bears in motion. This aid allows operators to observe slight fluctuations in torque and fine-tune difficult-to-teach programs, like for insert molding.

## All-Axis Manual Operation Screen

Operators can see and control all axes on just a single screen, enhancing operability.
